Kao Corporation

GLOBAL PRODUCT STRATEGY SAFETY SUMMARY

EMULGEN 130K

This document is a high-level summary provides usage of chemical substances and safety information to the general public. It is not intended to replace the Safety Data Sheet, which is available from suppliers and should be referred to for full details of recommended safety procedures for each type of use. It is not intended to replace or supersede manufacturer's instructions and warnings for their consumer products containing this substance.

1. Substance Identity

Brand Name: EMULGEN 130K

Chemical Name: Polyoxyethylene (41) lauryl ether

CAS Number: 9002-92-0

2. Uses and Applications

EMULGEN 130K is a nonionic surfactant. EMULGEN 130K is characterised by low textile damage and skin irritation and is used in industrial applications as an emulsifier for paints, coatings or fabric processing agents.

3. Physical/Chemical Properties

EMULGEN 130K has no identified physicochemical hazards.

Property	Value
Physical state	Solid
Color	White to pale yellow
Odour	Slight characteristic odor
рН	4 - 6 (1% solution)
Density	1.0645 g/mL (50 °C) (122 °F) 1.0493 g/mL (70 °C) (158 °F)
Melting point	37 °C (99 °F)

Boiling point	No information available
Flash point	230 °C (446 °F) (Pensky Martens closed cup)
Flammability	No information available
Explosive properties	No information available
Self - ignition temperature	No information available
Vapour pressure	No information available
Water solubility	Soluble
Octanol - water partition coefficient (log Kow)	No information available
Viscosity	135 mPa⋅s (50 °C) (122 °F)
	100 mPa⋅s (60 °C) (140 °F)
	76 mPa⋅s (70 °C) (158 °F)

4. Human Health Safety Assessment

Based on the available data, undiluted EMULGEN 130K could cause severe irritation to the eyes.

Effect Assessment	Result
Acute Toxicity oral/dermal	Based on the available data, no acute toxicity after oral/dermal exposure in practical use. The substance does not cause damage to any organs following single exposure.
Irritation skin/eye	Based on the available data, unlikely to cause skin irritation. Undiluted substance causes serious eye damage
Sensitization	Based on the available data, unlikely to cause allergic skin reaction.
Toxicity after repeated exposure	Unlikely to cause any toxic effects through prolonged or repeated oral exposure in practical use.
Mutagenicity	Based on the available data, unlikely to cause genetic defects.
Carcinogenicity	Based on the available data, unlikely to cause cancer.
Toxicity for reproduction	Based on the available data, unlikely to be damaging to fertility or the unborn child.

5. Environmental Safety Assessment

Based on the available data, EMULGEN 130K is not to cause toxicity for aquatic organism. EMULGEN 130K is unlikely to persist in the environment because of showing the readily biodegradation. EMULGEN 130K does not bioaccumulate in the food chain.

Effect Assessment	Result
Aquatic Toxicity	Based on the available data, not to cause toxicity for aquatic organism.
Biodegradation	Readily biodegradable.
PBT/vPvB conclusion	Not persistent in the environment, not bioaccumulating in organisms and not toxic nor very persistent and very bioaccumulating.

6. Exposure

<u>Consumer</u>

EMULGEN 130K is limited to industrial use. In addition, since there is little elution of EMULGEN 130K from industrial products, there is little exposure to consumers.

Worker

The exposure can occur either in EMULGEN 130K manufacturing facilities or in the various industrial facilities when EMULGEN 130K is used. Those workers in industrial operations during maintenance, sampling, testing, or other procedures could be exposed with EMULGEN 130K. Only qualified and trained workers handle the undiluted substance. The manufacturing facilities offer thorough training program for employees and appropriate work processes, as well as safety equipment (goggles and gloves) in place to present an unnecessary exposure. Safety showers and eye-wash stations are accessible nearby. Workers are required to be trained in accordance with the safety measures in the Safety Data Sheet.

Environment

EMULGEN 130K is discharged to waste water treatment facilities from industrial sites such as manufacturing, preparation, handling, storage and use of the substance. However, the substance is readily biodegradable, so that it is removed efficiently in waste water treatment facilities. The substance is biologically degraded in the surface water and is rapidly removed even if it is remained slightly in the waste water. Hence, the chronic exposure to aquatic organisms of the substance is unlikely to occur. Furthermore, the substance dose not accumulate in the food chain, so that there is no concern of human exposure through environmental pathway.

7. Risk management recommendations

When you use the substance, make sure to be measured the adequate ventilation. Always use appropriate chemical-resistant gloves to protect your hands and skin and always wear eye protection equipment. Do not eat, drink or smoke where the substance is handled, processed or stored. Wash hands and skin after contact with the substance. When the substance attaches to skin (or hair), wash with a large amount of water and soap. When it causes your skin irritation, consult doctor (medical diagnosis/therapy). If the substance gets into your eyes, rinse your eyes thoroughly for several minutes. If you wear contact lens, and you can take it off easily, take it off and continue to rinse your eyes. If eye irritation persists, get medical help.

Waste water containing the substance must be passed the waste water treatment facilities in order to remove the substance. No specific measures are needed, because it is not expected to be released into the air.

8. Regulatory Information / Classification and Labelling

Under GHS classification chemical substances are classified in hazards for physical properties, human health and environment. The hazard information for industrial products are transmitted via specific labels and Safety Data Sheet. GHS offers the standardization for hazard communication. The subjects who could be assumed to be exposed to the substance, workers, consumers, transport workers, and emergency responders, can better understand the hazards of the chemicals in use through the transmission.

Labeling according to UN GHS

UN GHS is the basis for country specific GHS labeling. EMULGEN 130K may be assigned to following GHS classification.

Classification and Labeling Information

Eye Dam. 1

Hazard Statements:

H318: Causes serious eye damage

Signal Word

Warning

The laws of manufacturing, sale, transport, use and disposal are different among countries or areas. Details are referred to Safety Data Sheet provided by the supplier.

9. Conclusion

EMULGEN 130K is not to cause toxicity for aquatic organism. EMULGEN 130K is unlikely to persist in the environment because of showing the readily biodegradation. EMULGEN 130K is not applicable to PBT/vPvB. Contact with the undiluted EMULGEN 130K may cause serious damage to the eyes. When handling the substance, workers should follow the standard safety measures and refer to the Safety Data Sheet. EMULGEN 130K is limited to industrial use. In addition, since there is little elution of EMULGEN 130K from industrial products, there is little exposure to consumers.

10. Contact information within company

For further information on this substance or product safety summaries in general, please contact:

Name	Kao Corporation, Global Chemical Business
Telephone number	+81-3-5630-7700
Fax number	+81-3-5630-7889
E-mail address	chemical@kao.co.jp

Additional information can be found at a chemical risk assessment support portal provided by the Japan Chemical Industry Associations, found at <u>https://www.jcia-bigdr.jp/jcia-bigdr/en/top</u>.

11. Glossary

Acute Toxicity	Adverse effects that result from a single exposure
Sensitization	Inducibility of allergy
Genotoxicity	Effects to induce gene mutations
Carcinogenicity	Action influence to cause a cancer
Toxicity for Reproduction	Adverse effects for teratogenicity, embryotoxicity, and reproductivity
Biodegradation	Biological degradation of a substance in environments
PBT (Persistent, Bioaccumulative and Toxic)	Substances that are environmentally persistent, bioaccumulative, and toxic
vPvB (Very Persistent and Very Bioaccumulative)	Substances with high persistence in the environment and high accumulation in ecology
GHS	Globally Harmonized System of Classification and Labelling of Chemicals

12. Date of issue

December 1, 2023
